

A Memory Booth for Tony

For the Celebration of Life · June 21

A simple, warm way for guests to record a short video message or memory for the family. One web app powers everything: it runs on a laptop as a quiet “booth,” it opens on phones via a QR code, and it stays online afterward so anyone who couldn’t attend can still share something.

This builds on Eduardo’s idea for a recording booth at the celebration of life. It’s a first draft to react to – nothing here is locked in.

I The idea in one paragraph

We set up a small, comfortable spot at the event. A guest sits down, taps one big button, and the camera gives them about 60-120 seconds to speak – a memory, a thank-you, a story about Tony. They tap again to finish. The message is saved safely for the family, and the screen resets for the next person. The exact same app also works on phones, so people who’d rather record on their own – or do it later from home – can scan a QR code and share that way.

2 What a guest experiences

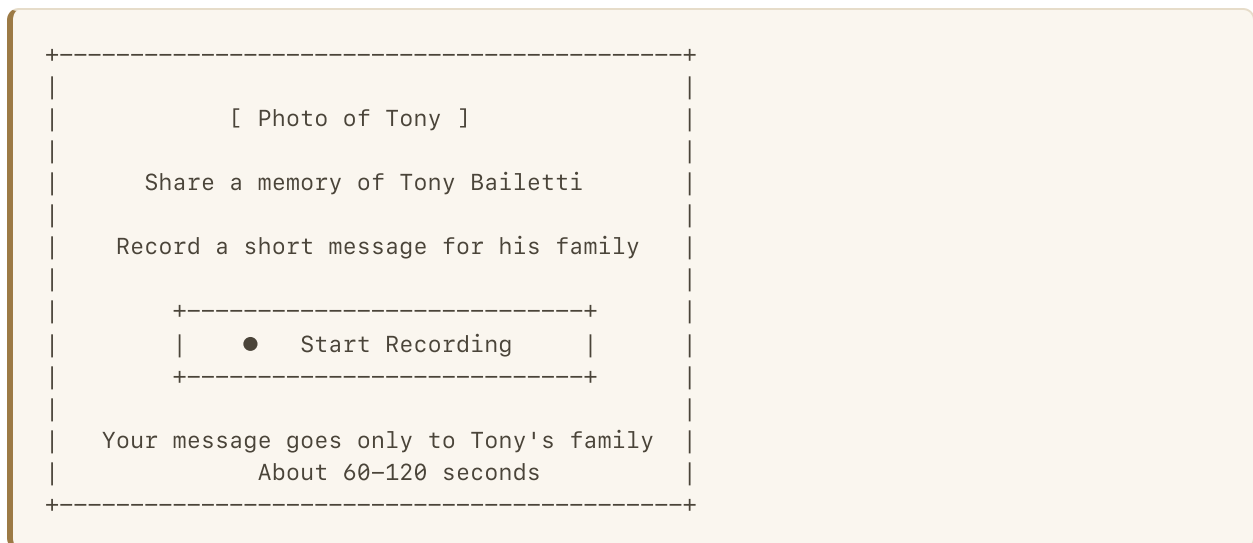

1. They see a welcome screen with Tony’s photo and a single **Start** button.
2. A gentle **3 • 2 • 1** countdown gives them a moment to settle.
3. Recording begins. A timer counts down; the button now says **Stop**.

4. When they finish (or time runs out), they can **watch it back** and choose **Keep & Send** or **Re-record**.
5. They can **optionally leave their name and a way to reach them**, in case the family would like to follow up with a thank-you – easy to skip.
6. A **thank-you** screen appears, then the booth resets for the next guest.

No accounts, no typing, no setup. The whole thing is one tap to start, one to stop.

Save & Done

SCREEN 6 – THANK YOU / SAVED

✓

Thank you for sharing.

Your message has been saved for
Tony's family.

(resets for the next guest)

THE BOOTH ITSELF (PHYSICAL SETUP)

A quiet corner / semi-private space

[ring light]
webcam [#]

Laptop / (mic)
big screen

[chair]

"Sit down, tap the button, share."

QR CARD (PHONES / AROUND THE ROOM / AFTER THE EVENT)

Share a memory of
Tony Bailetti

[QR CODE]

Scan to record a message
for the family

4 Three ways people can use the same app

Way	Where	Best for
Booth	A laptop + webcam + mic in a quiet corner	The main experience – best audio/video, a calm private moment, easy for guests who aren't comfortable with phones
QR on phones	Cards / posters around the venue	Many people at once with no line; people who'd rather record themselves
After the event	A shared link	Anyone who couldn't attend, or who wants to think about what to say

The booth is the centerpiece. The QR and after-event link cost us almost nothing extra to offer, and they make sure no one who wants to contribute gets left out.

5 Making sure nothing is ever lost

This only happens once, so the most important promise is: **we never lose a message**. The plan is built around that:

- The booth **saves each recording the instant it's finished**, before anything else, so a weak venue Wi-Fi connection can't cause a loss.
- Saved recordings then upload to private cloud storage in the background.
- At the end of the night we also keep a copy on a USB drive as a backup.
- Every guest sees a clear "✓ saved" confirmation so no one is left wondering.

6 The website can hold more than recordings

Since we're building a site anyway, it can quietly grow into a small place that holds more of Tony – the photos and videos we already have, and the messages people record. If the family likes the idea, the recorded memories could later become part of a lasting online tribute that lives at the same address.

A POSSIBLE LATER LAYOUT – ENTIRELY OPTIONAL, NOT NEEDED FOR JUNE 21

tonybailetti.com		
[hero photo of Tony] Remembering Tony Bailetti		
[Share a Memory]	<- record	
His Story	Photos	Videos
[wall of messages – family-only]		

7 Domain & hosting

Suggested domain: tonybailetti.com – it’s available now. It’s clean, it’s his name, and it can hold both the memory booth now and a fuller tribute later. *Suggestion: Eduardo purchases and owns the domain* (roughly ~\$10-12/year at most registrars – worth confirming at checkout). Joe is happy to help with the technical setup.

Hosting: Cloudflare. It’s a great fit for this and keeps everything in one place:

- **Cloudflare Pages / Workers** – serves the recording web app.
- **Cloudflare R2** – private storage for the video messages (no surprise egress fees, well-suited to media files). (*Check Cloudflare’s current R2 pricing for exact numbers; volume here will be small.*)
- **Cloudflare Access** – optional, to lock the “view all messages” page so only the family can see it.

Everything lives in one Cloudflare account that Joe can help configure.

8 A few things to decide together

- **Who can see the messages?** Default plan: private to the family only.
- A short, gentle **consent line** on screen (e.g. “Your message will be shared with Tony’s family”) – good to agree on the exact wording.

- **Contact details are optional** and kept private – collected only so the family can reach out to say thank you, and never shared further.
- Rough **number of guests**, so we can plan booth capacity / whether to add a second station.
- Is there a **quiet corner** at the venue we can use for the booth?
- **Hardware:** one good external webcam + a clip-on or USB mic makes a big difference over a laptop's built-in mic. We can sort out what to borrow / bring.

9 Rough timeline (today → June 21)

When	What
This week	Confirm the idea, buy tonybailletti.com , agree on privacy + consent wording
~1 week out	Build the recording app, set up Cloudflare storage, test on real iPhones & Androids
Few days out	Dry run with the actual booth laptop + webcam + mic; print QR cards
June 21	Set up the booth, keep the QR link live, collect messages
After	Hand the family all recordings; optionally fold them into a lasting tribute

There's comfortably enough time. The build itself is small; most of the care goes into testing and reliability.

10 Next steps

1. Get a thumbs-up (or changes) on this rough plan.
2. **Eduardo:** purchase and own tonybailletti.com, and share any photos or videos of Tony he has, if available.
3. **The rest of the team:** build and test the recording app on real phones.
4. Dry run the full booth before the day.

If this feels right, we'll start on a working prototype so you can try it yourself well before the 21st.

A first draft, shared with care. Everything here is open to change.
